The TRID polynucleotides are useful for detecting complementary polynucleotides. TRID proteins and polynucleotides are useful in the treatment of tumours, resistance to parasite, bacteria and viruses, restenosis and graft versus host disease. They are also useful for inducing proliferation of T-cells, endothelial cells and certain haematopoietic cells, to regulate antiviral responses and to prevent certain autoimmune diseases after stimulation of TRID by an agonist or TRAIL binding facilitator. The antibodies which bind TRID polypeptides are useful for treating and/or preventing diseases associated with increased or decreased apoptotic cell death. The TRID polypucleotides, proteins, antibodies, agonists and antagonists are useful in the diagnosis, treatment or prevention of: (a) cancer; (b) autoimmune disorders; (c) diseases associated with increased apoptosis; (d) cardiovascular disorders; and (e) viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    intracellular domain, also referred to as tumour necrosis factor receptor 5 (TNFR-5 or TR5)). TRID has cytostatic, immunosuppressive, nootropic, neuroprotective, antiviral, antiinflammatory, anticonvulsant, antiparasitic, cardiant, anti-HIV, antiparkinsonian and vasotropic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         factor (TNF) related apoptosis inducing ligand (TRAIL) receptor without

RESULT ANUSCEP PT S19.
FT S19.
c receptor, TRS (see AAW76331). An expressed sequence tag (EST 213397) to derived from a cDNA libray made from human prostate was found to have sequence similarity to the human tumour necrosis factor (TNF) creceptor. A search through several overlapping ESTs indicated that this represented the 5' most EST of the assemble and so it was completely sequenced. Analysis of the 1410 cDNA sequence indicated that it encoded a complete open reading frame for a novel member of the TNF receptor superfamily. A polynucleotide encoding TRS can be obtained from a cDNA library derived from mRNA in cells of prostate, endothelial cells, interleukin-1 beta-treated smooth muscle cells, foetal liver spleen cells, and pregnant uterus using enapresed sequence tag analysis. Treatment of a subject in need of cenhanced TRS polypeptide activity comprises administering an agonist to the polypeptide and/or providing TRS polynucleotide in a form so cc as to effect production of the polypeptide activity in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            stroke; ischaemia; acute respiratory disease syndrome; psoriasis; restenosis; brain injury; AIDS; bone disease; cancer; atherosclerosis; Alzheimer's disease; therapy; diagnosis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotide encoding TR5 polypeptide - used to diagnose, prevent and treat e.g. inflammation, arthritis, septicaemia, autoimmune diseases, infections, stroke, ischaemia, ARDS, psoriasis, restenosis, brain injury, AIDS and bone diseases

Diagnosing a disease or a susceptibility to a disease related to expression or activity of TR5 polypeptide, comprises determining the presence or absence of mutation in the nucleotide sequence encoding the TR5 polypeptide in the genome of the subject and/or analysing for the presence or amount of TR5 polypeptide expression in a sample. Identification of compounds which bind to TR5 comprises contacting host cells with a candidate compound and assessing the ability of it to bind to the cells. The active agents can be used for the treatment of chronic and acute

RESULT AND STATE OF S
  CC AAZ2103 to AAZ21102 encode new human secreted proteins and AAY29861 to CX sequences. AAZ21103 to AAZ21112 represent probes for the secreted CX proteins. The polynucleotides and proteins are predicted to have CX biological activities which would make them suitable for treating, CX preventing or ameliorating medical conditions in humans and animals, CX although no supporting data is given. Suggested activities include cX activity, immune stimulating (e.g. as vaccines) or suppressing activity, that is given activity, hammone stimulating (e.g. as vaccines) or suppressing activity, activity, indicativity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory cx and thrombolytic activity, receptor/ligand activity, anti-inflammatory cx inhibition activity. The polynucleotides and proteins can also be used cx surce and use as a source or supplements. Such uses include use as a protein or amino acid supplement, use as a carbon source, use as a nitrogen cx source and use as a source of carbohydrate. They may also have utility in compositions used for bone, cartilage, tendon, ligament, and/or nerve cx issue growth or regeneration, as well as for wound healing and tissue crepair and replacement, and in the treatment of burns, incisions and cx it the healing of bone fractures and cartilage damage or defects in humans cx and other animals.

CC receptor polypeptides: APO4, APO6, APO8 and APO9 or their active control in active fragments, and isolated TNF related ligands 1 and 3 (TNRI1 and TNRI3) or their active fragments. APO4 is useful for diagnosing prostate cancer context determining levels of APO4 is useful for diagnosing prostate cancer context. APO4 polypeptides are also useful for identifying selective be treated using APO4 selective binding agents linked to a therapeutic context. APO4 polypeptides are also useful for identifying selective context. APO4 polypeptides are also useful for identifying selective context. APO4 polypeptides are also useful for identifying selective context. APO4 polypeptides are also useful for identifying selective context. APO4 polypeptides are also useful for sextracellular, or context. APO4 polypeptides, active fragment which is extracellular, or context. APO4 polypeptides, active fragments are also useful for screening context. APO4 polypeptides, active fragments useful in diagnosis or treatment of disease are also identified using APO4 polypeptides/active context. APO4 polypeptides are also identified using APO4 polypeptides/active with a cytoplasmic domain of APO4 and detecting a change in level of APO4 activity. The method is performed in vitro. APO9 polypeptides are also identified using APO4 is also useful for diagnosis/treatment of developmental or gestational also context. APO6 was transfected to human breast carcinoma cell line approaches.
                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TRAIL-R3 (See AAY05726), a novel mammalian cysteins from the control of the tumour necrosis factor receptor family. The invention is related to novel receptors for TRAIL, i.e. TRAIL-3 and TRAIL-2 (see AAY05725). TRAIL-3 is a putative glycosylphosphatidylinositol-anchored protein, which is either cell-associated or processed and secreted. Secreted TRAIL-R3 competes for the binding of TRAIL to TRAIL-R1. Candot of TRAIL-R2, thereby acting as an inhibitor of apoptosis. Taylor of the provided the training of the properties of the provided to peripheral blood lymphocytes and skeletal muscle. It is likely that TRAIL-3 acts as an important regulator of TRAIL-R2 and -R3 induced cell death in two. A method for preventing or reducing the advancement, severity or effects of an immunological disease involves administering a CTRAIL-R2 or TRAIL-R3 blocking agent such as a soluble TRAIL-R (preferably comprising a human immunoglobulin Fc domain) and an antibody. A method of treating cancer involves administration of antibodies against TRAIL-R3 or TRAIL-R2. A method of inducing cell death involves administration of an agent capable of inhibiting the binding of TRAIL-R2 or -R3 to its ligand.

The present invention relates to methods for identifying a transdomain (TM) of a membrane-spanning protein. The method comprises modifying a nucleic acid encoding a death domain (DD)-lacking me spanning protein (e.g. Trail Receptor without Intracellular Doma by replacing the nucleic acid encoding the TM of the DD-lacking

comprises

Domain; membrane

TRID)

transmembrane

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           727
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TRID;
```

```
cc which expresses a DD-containing receptor. The absence of apoptosis of the CC host cell is determined following exposure of the transfected cell to an CC apoptosis inducing ligand. Candidate nucleic acids encoding TM prevent CC apoptosis of the host cell. The modified nucleic acid encoding the CC modified death domain-lacking membrane-spanning protein can also include CC a nucleic acid sequence encoding an epitope tag. The present sequence is CC the coding sequence for a FLAG-TRID clone, which was used in the method CC of the present invention. This sequence comprises the human TRID coding CC sequence and a sequence encoding the FLAG-epitope tag. The FLAG-epitope CL is a useful marker to purify proteins encoded by the modified DD-lacking CC membrane-spanning protein. The identified TM and membrane-spanning CC proteins may be used in defining processes involved in cell suicide and CL issue homeostasis, and to evaluate, interfere and treat events, such as CC cell proliferation and cell-cell signalling pathways.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B
The present invention relates to methods for identifying a transmembrane domain (TM) of a membrane-spanning protein. The method comprises modifying a nucleic acid encoding a death domain (DD)-lacking membrane spanning protein (e.g. Trail Receptor without Intracellular Domain; TRID by replacing the nucleic acid encoding the TM of the DD-lacking membrane-spanning protein with a candidate nucleic acid sequence to produce a nucleic acid encoding a modified DD-lacking membrane spanning protein. The modified nucleic acid is then transfected into a host cell, which expresses a DD-containing receptor. The absence of apoptosis of the host cell is determined following exposure of the transfected cell to an apoptosis-inducing ligand. Candidate nucleic acids encoding TM prevent apoptosis of the host cell. The modified nucleic acid encoding the modified death domain-lacking membrane-spanning protein can also include
                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying a transmembrane domain of a membrane-spanning protein useful in defining processes in cell suicide and tissue homeostasis, comprises modifying the nucleic acid encoding a death domain-lacking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mat_peptide

The present sequence is the coding sequence for a FLAG-TRID clone, which was used in the method of the present invention. This sequence comprises the human TRID coding sequence and a sequence encoding the FLAG-epitope tag. The FLAG-epitope is a useful marker to purify proteins encoded by the modified DD-lacking membrane-spanning protein. The identified TM and membrane-spanning protein membrane may be used in defining processes involved in cell suicide and tissue homeostasis, and to evaluate, interfere and treat events, such as cell proliferation and cell-cell signalling pathways.

                                                                                                                The present sequence is a cDNA encoding human receptor-associated protein (HRAP) from Incyte clone 3472455 obtained from LUNGNOT27 cDNA library. This sequence is expressed in musculoskeletal, cardiovascular and urologic tissues. HRAP has cytostatic, immunomodulatory, antiinflammatory, cardiant, antiarteriosclerotic, hepatotropic, antiarthritic, antifheumatic, osteopathic, antiallergic, antianemic, antiasthmatic, antidiabetic, dermatological and neuroprotective activities. The present sequence is useful in the diagnosis, treatment and prevention of disorders associated with HRAP expression, especially cell proliferative, autoimmune/inflammatory, reproductive, cardiovascular and gastrointestinal disorders (e.g. atherosclerosis, cirrhosis, leukaemia, cancer, AIDS, arthritis, allergies, anaemia, asthma, dermatitis, diabetes, osteoporosis, multiple sclerosis and

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB

Human TRID protein

AAW64668; 23-OCT-1998

(first entry)

TRAIL receptor without intracellular domain; TRID; TNFR-5; human; tumour necrosis factor receptor-5; TNF-related apoptosis-inducing ligand; haematopoietic tissue; immune system; ligand; apoptosis; treatment.

TRID is expressed in haematopoietic tissues and other normal human tissues. For a number of immune system-related disorders, substantially altered (whether increased or decreased) levels of TRID gene expression can be detected, therefore the TRID polypeptides, nucleic acids and antibodies are useful in the diagnosis of such immune system related disorders. Mutations of the TRID gene can also be used to identify ligands which may be useful in the treatment of apoptosis related disorders. TRID is administered to humans at a parenteral dose of 0.01 to 1 mg/kg/day.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a human TRID (TRAIL apoptosis-inducing ligand) receptor without a TRID is a member of the tumour necrosis factor also known as TNFR-5. ```

```
This polypeptide comprises human Apo-2DcR, a novel member of the tumour necrosis factor receptor family that binds to Apo-2 ligand. Its amino acid sequence was deduced from the nucleotide sequence of an isolated cDNA clone (see AAV84347); an alternative translation
        than
               initiation site in this clone will encode a polypeptide (see AAW88409) comprising amino acid residues -40 to 269 of Apo-2DcR. Apo-2DcR shows more sequence identity to DR4 (60%) and Apo-2 (50%)
                                                                                                             New Apo-2DcR polypeptide - used for modulation apoptosis, e.g. in neurodegeneration

99999999999999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ATCC 209087. The invention provides vectors and host cells for recombinant production of Apo-2DcR polypeptides, antibodies, and transgenic and knockout animals (useful e.g. for screening and developing drugs that protect against excessive apoptosis).

Apo-2DcR, or chimeras comprising Apo-2DcR or its (claimed) extracellular domain fused to a heterologous polypeptide are used to modulate apoptosis of mammalian cells (claimed) and/or NF-kappaB activation by Apo-2 ligand, and may be expressed in vivo or ex vivo for gene therapy. They can be used in methods for the modulation and diagnosis of apoptosis e.g. in cases of neurodegeneration, autoimmune diseases and inflammation. Most human tumour cells do not express Apo-2DcR transcripts, but normal tissues do, suggesting that Apo-2DcR may permit selective killing of cancer cells by Apo-2 ligand, possibly by protecting normal, but not cancerous, cells.

ANUI2172-ANUI2446 represent novel human secretory and transmembrane CC PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing CC PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, and to detect the presence of mammalian lung, colon, breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. CS come of the 275 sequences are also useful to stimulate the release of tumour necrosis factor alpha (TNF alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or cg ene expression in pericyte cells, the release of proteoglycans from cartilage, the proliferation of inner ear utricular supporting cells or of T-lymphocytes, the release of a cytokine from peripheral blood cmonocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide confocules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, cc transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Apo-2DCR, a novel human immunomodulator (27 kDa, p1 4.84), as deduced from a human breast carcinoma cDNA clone (see AAF30053). Apo-2DCR shows homology to apoptosis-linked receptors of the tumour necrosis factor receptor family, such as DR4 and Apo-2. The invention provides polynucleotides (see AAF30050-62) encoding novel human PRO proteins (see AAB20108-20) including PRO366. Claimed compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diagnosing sclerosis,

TRID proteins and polynucleotides are useful in the treatment of tumours, resistance to parasite, bacteria and viruses, restenosis and graft versus host disease. They are also useful for inducing proliferation of T-cells, endothelial cells and certain haematopoletic cells, to regulate antiviral responses and to prevent certain autoimmune diseases after stimulation of TRID by an agonist or TRAIL binding facilitator. The antibodies which bind TRID polypeptides are useful for treating and/or preventing diseases associated with increased or decreased apoptotic cell death. The TRID polypucleotides, proteins, antibodies, agonists and antagonists are useful in the diagnosis, treatment or prevention of: (a) cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents the human TRID protein (tumour necrosis factor (TNF) related apoptosis inducing ligand (TRAIL) receptor without intracellular domain, also referred to as tumour necrosis factor receptor 5 (TNFR-5 or TR5)). TRID has cytostatic, immunosuppressive, nootropic, neuroprotective, antiviral, antiinflammatory, anticonvulsant, antiparasitic, cardiant, anti-HIV, antiparkinsonian and vasotropic activities, and can be used in gene therapy. The TRID polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TRAIL receptor without intracellular domain; diagnosis; cytostatic; tumour necrosis factor related apoptosis inducing ligand; vasotropic; immunosuppressive; neuroprotective; antiviral; antiinflammatory; anticonvulsant; antiparasitic; cardiant; anti-HIV; antiparkinsonian; gene therapy; restenosis; graft versus host disease; tumour; cancer; apoptotic cell death related disease; autoimmune disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid encoding a TRID polypeptide, also referred to as tumor. necrosis factor receptor 5, useful in the diagnosis, treatment or prevention of cancer, autoimmune disorders and viral infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 15;
                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                               apoptosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Wei Y,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20-MAY-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC expression of activity; diagnosing a cardiovascular, endothelial or CC angiogenic disorder, or a susceptibility to such a disorder by detecting CC mutations in a PRO gene, or the expression level of a PRO gene within a CC particular tissue; treating a cardiovascular, endothelial or angiogenic CC disorder via the administration of a PRO protein, PRO nucleic acid, or CC PRO agonist or antagonist; a retroviral gene therapy vector comprising a CC ell growth, cardiac hypertrophy or PRO-induced angiogenesis via the CC administration of a PRO proteins, antibodies against pRO proteins, PRO proteins, an agonist or antagonist thereof. CC PRO nucleic acids, PRO proteins, antibodies against PRO proteins, PRO CC agonists and PRO antagonists may be used as therapeutic agents to treat CC cardiovascular, endothelial or angiogenic disorders, such as atherosclerosis, osteoporosis, myocardial infarction, hypertension, CC diabetic retinopathy, rheumatoid arthritis, Crohn's disease, psoriasis, CC endometriosis, ulcers, wounds, cancer, Alzheimer's disease, Huntington's CC disease, or stroke. PRO nucleic acids are additionally useful in the recombinant production of PRO proteins, to analyse genetic disorders, and in gene therapy. PRO nucleic acids can also be used to produce transgenic CC invention. PRO proteins to development and screening of potential collavention. The development and screening of potential of the present sequence represents a PRO protein of the collavention.

```
activity comprises administering an antagonist to the polypeptide, administering a nucleic acid that inhibits the expression of the nucleotide sequence encoding the polypeptide and/or administering a polypeptide that competes with the polypeptide for its ligand, substrate or receptor. Diagnosing a disease or a susceptibility to a disease related to expression or activity of TR5 polypeptide, comprises determining the presence or absence of mutation in the nucleotide sequence encoding the TR5 polypeptide in the genome of the subject and/or analysing for the presence or amount of TR5 polypeptide expression in a sample. Identification of compounds which bind to TR5 comprises contacting host cells with a candidate compound and assessing the ability of it to bind to the cells. The active agents can be used for the treatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune diseases (e.g. oraff vs host disease, psoriasis), transplant rejection,
                                      graft vs host disease, infection, stroke, ischaemia, acute respiratory disease syndrome, restencis, brain injury, AII diseases, cancer (e.g. lymphoproliferative disorders), atherosclerosis and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                protein that has a membrane proximal O-glycosylation region. The invention provides methods for the recombinant production of TR5 and its use in diagnostic and therapeutic methods. Treatment of a subject in need of enhanced TR5 activity comprises administering an agonist to the polypeptide and/or providing TR5 polynucleotide in a form so as to effect production of the polypeptide activity in vivo. Treatment of a subject with the need to inhibit TR5 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the amino acid sequence of human tumour necrosis related receptor TR5, as deduced from the sequence of an isolated cDNA clone (see AAV56990). The protein is characterised as a GPI-linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polynucleotide encoding TR5 polypeptide - used to diagnose, prevent and treat e.g. inflammation, arthritis, septicaemia, autoimmune diseases, infections, stroke, isohaemia, ARDS, psoriasis, restenosis, brain injury, AIDS and bone diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inflammatory bowel disease; graft versus host disease; infection; stroke; ischhemia; acute respiratory disease syndrome; psoriasis; restenosis; brain injury; AIDS; bone disease; cancer; atherosclerosis; Alzheimer's disease; therapy; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 5; Fig 1; 22pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 1998-497862/43.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Q
AAZ21093 to AAZ21102 encode new human secreted proteins and AAZ29861 t AAZ29873 represent the secreted proteins encoded by the polynucleotide sequences. AAZ21103 to AAZ21112 represent probes for the secreted proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity haematopoiesis regulating activity, tissue growth activity, haemostat activity, chemotactic/chemokinetic activity, haemostat

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides and proteins can also be used as nutritional sources or supplements. Such uses include use as a protein or amino acid supplement, use as a carbon source, use as a nitrogen source and use as source of carbohydrate. They may also have utility in compositions used for bone, cartilage, tendon, ligament, and/or nerve tissue growth or regeneration, as well as for wound healing and tissue repair and replacement, and in the treatment of burns, incisions and ulcers. The proteins which induce cartilage and/or bone growth in the healing of bone fractures and cartilage damage or defects in humans activities.
